Cisco password recovery

Password recovery

Switch on the router and press Ctrl + Break keys for 15 seconds.Then the router will enter to rommon mode.

Rommon1> config-register 0x2142

Rommon2> Reset

Router will start without loading prior values of NVRAM.

Router> enable

Router # copy start run

Router # show run

This will show us the pass word saved before.Next time when the router switching on

Press Ctrl + break keys for 15 seconds

Rommon1> config-register 0x2102

Rommon2>reset

Then the router will prompt for the password again.
